

Extended Case Study Report

This extended version of the case study report includes visual project planning aids. The Gantt chart illustrates the sequence and duration of each project planning phase, while the timeline chart highlights the chronological flow of tasks. Together, these charts provide a clear view of task dependencies, scheduling, and progress tracking. **Interpretation:**

- The **Gantt chart** shows each project phase (Requirement Analysis, Scope Definition, WBS, etc.) along with its start and end dates. It helps in tracking overlaps and dependencies.
- The **Timeline chart** gives a linear view of tasks across the calendar, useful for understanding order and continuity.
- These visuals ensure better project monitoring, communication with stakeholders, and risk management.
